Introduction and Disclaimer

The 2024 Tennessee Field Crop Budgets were developed to assist producers and other agricultural decision-makers in evaluating the returns of different row cropping alternatives. The budgets use production alternatives, management strategies, machinery and inputs that are commonly utilized in row-crop production in Tennessee. Given the diverse nature of row-crop production in the state, it is impossible to account for all possible production scenarios and circumstances. As such, this guide should be utilized to assist decision-makers in their annual planning efforts. To develop a custom budget for a specific field or operation, interested parties are strongly encouraged to use University of Tennessee Extension's Excel-based spreadsheet available online at arec.tennessee.edu/extension/budgets/. The spreadsheet uses the same format as the budgets contained in this document; however, it allows the user to change yields, input quantities, input prices, machinery costs and add additional costs that are specific to a field or enterprise. This allows users to adjust for region- and site-specific production methods and input selections.

This publication and the accompanying Excel spreadsheet contain short-term planning budgets for corn, cotton, soybean and wheat enterprises. These budgets should be used for short-run or annual plans developed for 2024, as significant changes may occur from year to year in production methods and input and output prices.

The fertilizer recommendations in the crop budgets are generally for soils that have a medium soil test. Farmers should have their soils tested in order to get maximum return for money spent for fertilizer. As crop programs are planned, the fertilizer applications can be adjusted to the soil test recommendations.

Disclaimer: Significant variability in inputs, prices and production methods exist in the production of row crops. The information contained in this document relies on estimates and assumptions that are specific to Tennessee row-crop production. These budgets should not be construed as a reflection of all circumstances across the state, as significant regional variability will occur. To improve the accuracy, users are encouraged to use inputs, prices and processes that are utilized on their specific farms in budget calculations.

Trade Names, Herbicides, Insecticides and Pesticide Caution

Use of trade or brand names in this publication is for clarity and information: It does not imply approval of the product to the exclusion of others that may be of similar, suitable composition, nor does it guarantee or warrant the standard of the product.

The herbicide and insecticide programs used in these budgets are based on UT Extension publications titled "2024 Weed Control Manual for Tennessee" (PB 1580) and "2024 Insect Control Recommendations for Field Crops" (PB 1768). Pesticides recommended in the publication were registered for the prescribed uses when this manual was printed. Pesticide registrations are continuously being reviewed. Should registration of a recommended pesticide be canceled, it will no longer be recommended by the University of Tennessee.

In order to protect people and the environment, pesticides should be used safely. This is everyone's responsibility, especially the user. Read and follow label directions carefully before you buy, mix, apply, store or dispose of a pesticide. According to laws regulating pesticides, they must be used only as directed by the label.

No direct government program benefits are included in the budgets. Adjust payment estimates as appropriate for your enterprise.

FOOTNOTES

¹ Revenue

Corn price was estimated using weighted average futures prices from September 2024 to July 2025, adjusted by average monthly basis in Tennessee. Corn yield is the predicted 2024 linear trend line yield for corn in Tennessee, using state average USDA-NASS yields from 2003-2023. Irrigated corn yield was estimated at 240 bu/acre.

Soybean price was estimated using weighted average futures prices from November 2024 to August 2025, adjusted by average monthly basis in Tennessee. Soybean yield is the predicted 2024 linear trend line yield for soybeans in Tennessee, using state average USDA-NASS yields from 2003-2023. Irrigated soybean yield was estimated at 65 bu/acre.

Wheat/Soybean. Soybean yield is the predicted 2024 linear trend line yield for soybeans in Tennessee, adjusted for double cropping system. Wheat price was estimated using weighted average futures prices from July 2024 to May 2025, adjusted by average monthly basis in Tennessee. Wheat yield is the predicted 2024 linear trend line yield for wheat in Tennessee, using state average yields from 2003-2023. If a market for wheat straw is available, add an appropriate amount to other revenue (\$/acre) based on the expected yield and price of the straw, being sure to account for additional harvest and marketing costs.

Cotton price was estimated using weighted average futures prices from December 2024 to July 2025, adjusted by average monthly basis in Tennessee. Cotton yield is the predicted 2024 linear trend line yield for cotton in Tennessee, using state average yields from 2003-2023. Most ginning arrangements provide producers cottonseed revenue net ginning costs, which should be included as additional revenue.

Sorghum price is estimated 10 cents above the price of corn, based on expected market conditions. Due to low acres and limited market access, prices may swing dramatically. Recently, in Tennessee, sorghum has been 10-25 cents above the price of corn.

² Seed Costs

Corn: Assumes a bag of seed costs \$288 and contains 80,000 seeds (\$3.60/thousand seeds). Seeding rate of 32,000 seeds/acre (36,500 for irrigated). Seed treatment is included in the price. Seed cost varies by variety.

Soybeans: Assumes a bag of seed costs \$63 and contains 140,000 seeds (\$0.45/thousand seeds). Seeding rate of 140,000 seeds/acre (150,000 for irrigated). Seed treatment is included in the price. Seed cost varies by variety.

Wheat: Assumes seeding rate of 2.5 bu/acre at \$18.00 per bushel. Seed treatment is included in the price. Seed cost varies by variety.

Cotton: Assumes \$2.65/thousand seeds. Seeding rate of 50,000 seeds/acre (60,000 for irrigated). Seed treatment is included in the price. Seed cost varies by variety.

Check with farm suppliers for rebates, discounts and incentives for seed and chemicals. Substantial cost savings may be available.

³ Fertilizer and Lime

Lime is assumed to be applied once every four years at a rate of 2 tons per acre (includes the cost of application). N, P and K quantities and prices are shown in elemental lb. Check with farm suppliers for rebates, discounts and incentives for fertilizers, seed and chemicals. Substantial cost savings may be available. Substantial variation in prices for fertilizer exist based on quantity purchased, product purchased and location of purchase.

4 Chemicals

Assumes a normal crop rotation with minimal weed infestation. A continuous monocrop system may require additional expenses for chemicals and/or land preparation. Weed control chemicals should be selected for specific weed or grass problems that are present. Generic chemicals may be a cost-effective option; contact your chemical supplier, qualified consultant or weed control specialist. Alternative weed control options are available in the University of Tennessee Weed Control Manual for Tennessee. Follow all labels, state and national regulations when using all chemicals. Check with farm suppliers for rebates, discounts and incentives for seed and chemicals. Substantial cost savings may be available. Seed treatments, such as some nematicide treatments, are optional and costs vary depending on product used.

5 Machinery

Machinery expenses will vary dramatically by operation, financial resources and land base. The machinery cost estimates provided in Table 3 are provided as an estimate of cost of ownership and operation for specified pieces of machinery that would be available to a "representative" row-crop farm in Tennessee. To estimate machinery costs for a specific set of equipment, interested parties can utilize the Excel version of the budgets and modify the Machinery Assumptions Table.

6 Crop Insurance

Crop insurance is an estimate and will vary by policy, county and coverage election. The estimate provided is the average premium paid per insured acre for each commodity in Tennessee for the previous production year, as reported by USDA RMA's Summary of Business Report.

7 Operating Interest

Operating interest is assumed to be charged on half of all variable expenses.

8 Cash Rental Rates

Cash rental rates are the 2023 USDA-NASS reported cash rental rates for cropland in Tennessee. Substantial differences may exist in cash rental rates reported by NASS and the prevailing rate in your location.

9 Irrigation

Center-pivot irrigation costs are estimated using the following assumptions: purchase price and installation cost of \$95,000; useful life of 20 years; and an irrigated acreage of 125 acres. Well depth and energy source will dramatically impact irrigation costs. Irrigation rates should be adjusted to meet commodity- and farm-specific applications. Irrigation costs are site and energy-source specific.

10 Management Labor

Management labor for irrigated acreage is assumed to be double that of dryland acres.
